Professional Summary

Data Analyst with hands-on experience across the full data workflow: ETL pipeline development, exploratory data analysis (EDA), statistical modeling, predictive modeling, and business reporting. Proficient in Python (Pandas, NumPy, Scikit-learn, TensorFlow), SQL (CTEs, window functions, query optimization), and Power BI (DAX, Power Query, KPI dashboards). Built ML models reaching 91% precision and analyzed 500,000+ transaction records in project work. Skilled in dimensional data modeling (star and snowflake schema), A/B testing, hypothesis testing, and feature engineering.

Technical Skills

- **Languages & Tools:** Python (Pandas, NumPy, Scikit-learn, TensorFlow, Statsmodels), SQL, DAX, Power BI, Excel, GitHub, Jupyter, VS Code, Google Colab
- **Machine Learning:** Classification, Regression, Clustering, XGBoost, Random Forest, LSTM, Neural Networks, Precision/Recall/F1/ROC-AUC, Cross-Validation, Hyperparameter Tuning, Time-Series Forecasting
- **Statistics & Analysis:** EDA, Hypothesis Testing, A/B Testing, Probability Distributions, Confidence Intervals, Regression Analysis, Feature Engineering, Outlier Detection
- **Data Engineering & BI:** ETL Pipelines, Star/Snowflake Schema, Dimensional Modeling, Fact & Dimension Tables, Data Warehousing, SQL Server, MySQL, PostgreSQL

Training

Data Analytics Trainee

Sep 2025 – May 2026

JSpiders Training & Development Center, Bengaluru

- Completed structured training in data analysis, statistical modeling, and business intelligence using Python, SQL, and Power BI.
- Performed end-to-end analysis on structured datasets: data cleaning, EDA, feature engineering, and reporting to support data-driven decision-making.
- Built and evaluated ML models (classification, regression, clustering) using Scikit-learn and XGBoost; tracked performance with precision, recall, F1-score, and ROC-AUC; applied cross-validation and hyperparameter tuning.
- Designed star and snowflake schema data models (fact/dimension tables); built ETL pipelines across SQL Server, MySQL, and PostgreSQL.
- Built interactive Power BI dashboards (DAX, Power Query) for KPI reporting; applied hypothesis testing and A/B testing to validate findings.

Projects

E-Commerce Revenue Optimization & Profitability Analysis (GitHub)

Python, SQL Server, Power BI, XGBoost, DAX

- Designed a dimensional star schema (fact tables: transactions, sales; dimension tables: customer, product, region, time) to support revenue and profitability analytics across 500,000+ e-commerce records.
- Built an XGBoost-based revenue forecasting model with feature engineering and cross-validation; improved prediction accuracy by 21% over a baseline linear model.
- Developed a 6-page interactive Power BI dashboard (DAX KPIs, Power Query transformations) covering sales trends, profitability, customer segmentation, and regional performance.

Predictive Maintenance System Using IoT Sensor Data (GitHub)

Python, XGBoost, Random Forest, LSTM, TensorFlow

- Collected and cleaned 20,000+ NASA Turbofan Engine IoT sensor records; performed EDA and feature engineering to extract degradation signals.
- Built and compared Random Forest, XGBoost, and LSTM models for Remaining Useful Life prediction; achieved 91% precision, flagging failures 10+ cycles in advance.
- Designed an end-to-end ML pipeline from ingestion to evaluation; visualized results with Matplotlib and Seaborn.

Delivery Time Prediction (GitHub)

Python, Scikit-learn, Regression, Feature Engineering

- Built a regression-based delivery time prediction model; performed EDA, outlier detection, feature engineering, and hyperparameter tuning via cross-validation on raw logistics data.
- Evaluated performance using RMSE, MAE, and R^2 ; visualized prediction results for stakeholder review.

Education & Certifications

B.E., Electronics & Communication Engineering

2021 – 2025

University College of Engineering, Ariyalur

Data Analyst & Data Science Certification

2025 – 2026

JSpiders – Python, SQL, Power BI, Machine Learning, Statistics, Data Modeling, Dashboard Development
